

FOR IMMEDIATE RELEASE – RecordMax Chattanooga Implements New Operating Systems; Adding Benefits to Both Customers & the Business

March 1st, 2008 – Chattanooga, Tennessee

RecordMax Chattanooga announced the migration of its core mission critical operating system for customers in Greater Chattanooga, TN and surrounding areas to O'Neil Software's RS-SQL Version 3.05; implemented over the last forty five days...with a LIVE date of March 1st, 2008.

The new operating system went thru a series of tests migrating data assuring the highest levels of accuracy during the actual transition when the operation formally went LIVE. **RecordMax** hired international systems and industry consultant Neil Hunt of Dumas Consulting to coordinate a large portion of the project; including onsite support & training of local Chattanooga facility team members. Mr. Hunt is a long time associate and friend of **RecordMax** USA President Jim Teske; which added to the comfort level of bringing in outside resources. "We've known each other for over ten years and have worked together in two different organizations; both when Neil was still in the U.K. as well as here in the U.S." offered Teske. "He knows his stuff...both from a systems and software standpoint...and has handled various data migration projects for some of the nation's largest commercial records centers. I know him, trust him, respect him...all that stuff...and he still executed confidentiality agreements of course because that's just a part of our business."

RecordMax also worked with O'Neil Software's Director of Sales Rick Jones to facilitate the proper versions, hardware configuration and to assure efficient implementation of Symbol handheld computers & barcode readers. **RecordMax** added one of the newer models of O'Neil's unique portable receipt printers. The new chain-of-custody hardware is the premier solution for tracking the movement of records at any transfer in the "chain of custody": from customer representatives; to RecordMax drivers; to the loading dock; to the actual shelf within **RecordMax's** secure facilities.

The new systems will provide a number of benefits to both the business and most importantly for customers. A premium web interface gives customers unparalleled flexibility, security and control over their information. The route accounting solution and other tracking mechanisms give clients an unparalleled audit trail. A number of internal features provide enhanced management and productivity solutions for the operation. And the new barcode label technology that was added in conjunction with the software conversion is the best possible identification solution for stored physical information assets.

About The RecordMax Companies

RecordMax is a proven leader in providing secure information storage and management services to law firms, hospitals, businesses, government entities and other professional organizations. Our archival services range from the protection of business records, files, computer tapes and other sensitive media to digital storage of electronic documents, images, email and web content.
