

***FOR IMMEDIATE RELEASE – RecordMax New Orleans and RecordMax Mobile Implement New High End Application Servers***

**February 1<sup>st</sup>, 2010 – New Orleans, LA and Mobile, AL**

The **RecordMax Companies** announced the implementation of new Dell PowerEdge Servers in both the Mobile, Alabama and New Orleans, Louisiana locations. The new server upgrades are part of an ongoing enhancement to **RecordMax** business systems for both improved performance and increased redundancy.

**RecordMax** President Jim Teske confirmed the new servers by saying “We started a long term strategic initiative in late 2008 to enhance every technology component of our business. The initiative included service capabilities, telecommunications, communications, software & hardware infrastructure and maybe most importantly knowledge and expertise. We added a new high speed internet backbone first, redundant and more efficient broadband telecom next, upgraded all operating systems and are now rolling out new hardware. When you add that to the people resources we’ve added, like our new Imaging Division Manager Phillip Cothren, the combined benefits to **RecordMax** customers are unparalleled in our history” added Teske.

The specifications of the new servers are impressive for a small business. The raid five servers offer six hot plug hard drives each for both redundancy and flexibility with over a terabyte of storage per branch. Each server also features dual quad core Intel Xeon processors with 12 GB of memory for maximum processing speed. And new virtual server technology offers the capability to run both the branches internal core operating system on one operating system and version of Microsoft SQL Server with another operating system and web interface for customers running on the same machine. The end result is the highest level of combined efficiency, integration and performance.

To protect the availability of business systems and assure maximum potential in regaining uptime in the event of a business interruption, databases are replicated between **RecordMax** branches. If power was lost in one branch, telecom can be forwarded remotely and the database restored in the remote **RecordMax** back-up location; assuring quick availability to customer information whenever required.

***About The RecordMax Companies***

**RecordMax** is a proven leader in providing secure information storage, retrieval, imaging, shredding & data protection services to law firms, hospitals, businesses, government entities or other professional organizations. Our archival services range from protecting business records, files, computer tapes and other sensitive media to offering digital storage of electronic documents, images, email & web content.
