FOR IMMEDIATE RELEASE – RecordMax Implements New and Improved Security for Online Systems and FTP File Hosting

September 1st, 2010 – Jackson, MS; New Orleans, LA; Mobile, AL; Chattanooga, TN

The RecordMax Companies are pleased to announce ongoing upgrades to a number of systems components for customers.

RecordMax has been working with business systems partners at Foresight Computers and Networking in installing new hardware and software at the various server locations designed to enhance redundancy and security for both company/client systems as well as for storage and delivery of scanned data held at ftp.recordmax.com.

The first focus was to upgrade online portals where customers can access metadata (descriptive information) about the records they store at RecordMax. The portals involve ftps (secure file transfer protocol) technology. For the core ftps system running on our servers, RecordMax selected Cerberus FTP Server Professional. Cerberus, LLC (based in Arlington, VA) produces software solutions for secure file server and digital certificate distribution & management. Cerberus FTP Server 4.0 includes sophisticated security and privacy controls, resuming failed file transfers and connection statistics with robust logging capabilities. Using Cerberus SFTP on RecordMax servers (in conjunction with a free downloadable client piece of software for customers) offers a easy-to-use yet highly secure solution for moving images or data.

Our second initiative includes the upgrading or enhancement of SSL Certificates on RecordMax servers for electronic/online interaction. Installing an SSL Certificate protects online information from hackers or cyber thieves. Once a website visitor enters a secure area of an SSL-protected website, an SSL "handshake" process takes place (behind the scenes) and a secure connection has been established. A padlock icon and "https://" prefix appear in the visitor's browser bar, indicating that a secure session is under way (unsecured websites showing an http:// prefix typically lose customers at this point). If protected with a Premium SSL Certificate, a green address bar will also appear including the Certificate holder's name.

At RecordMax, we take our commitment to security very seriously and welcome your comments and/or feedback anytime.

About The RecordMax Companies

RecordMax is a proven leader in providing secure information storage, retrieval, imaging, shredding & data protection services to law firms, hospitals, businesses, government entities or other professional organizations. Our archival services range from protecting business records, files, computer tapes and other sensitive media to offering digital storage of electronic documents, images, email & web content. Enjoy convenient, professional delivery and retrieval solutions...we treat every item we handle just like the largest of shipping companies; with barcode based tracking technology and portable receipt printing by the drivers that bring information assets right to your door. Convert paper documents to digital using our leveraged resources or buy the software and/or hardware you need direct from RecordMax. And enjoy safe and secure document shredding services at competitive prices.

The resources and experience of our management team combined with hiring the best possible leaders for local customers assures confidence, consistency and quality from the people our customers have come to trust. With a growing number of locations around the Southeast, RecordMax stands ready to be a trusted part of your information management team.

You'll be glad you chose the people, the facilities and the business solutions at **RecordMax**.
